

FREE MEMBERSHIP AND REGISTRATION EVENTS AND WEBINARS

Institution of
**MECHANICAL
ENGINEERS**

We offer a range of membership and professional registration events in virtual or face-to-face format. With a wide range of topics covered, there is something for everyone.

Become Professionally Registered

The go-to event for anyone seeking an overview of who we are, and what we offer engineers and technicians.

We explore the academic requirements for EngTech, IEng or CEng registration. You will gain an understanding of the 5 UK-SPEC competences required by the Engineering Council to become a registered engineer, and the process to becoming registered. We conclude with the requirements for the Professional Review Interview (PRI), the many benefits of registration and a question-and-answer session.

Become an EngTech

Exclusively designed for EngTech applicants, this session explains the academic and competence requirements for EngTech registration. We will also advise you on your application and the many benefits of EngTech registration to help you progress in your career.

Become a Fellow

Being a Fellow demonstrates the highest level of engineering experience, commitment, and contribution to the sector.

This session gives you an overview of the requirements for Fellowship, and how you can demonstrate that you met them. We cover the application process and what happens after the application has been submitted.

Applications Workshop

This is one of our most popular events. These workshops are opportunities for you to get guidance and support in writing up the CEng or IEng application form and preparing for PRI.

Times and formats vary, but as a face-to-face event, it would typically run from 10am to 2.30pm. Applicants write up their form on their laptops and the trainer is on hand to provide guidance and feedback. You will have the opportunity to have your draft application reviewed prior to submission. Sessions are also available for EngTech applicants.

Membership Surgeries (1-2-1 meetings)

Looking for an opportunity to get more in-depth advice on becoming professionally registered. These 1-2-1 meetings would be perfect for you. You may hold a non-accredited degree, have no formal qualifications or aspire to become a Fellow. Book now for personalised advice and support.

Mentor Training

Mentors play a crucial role in supporting Developing Engineers. This workshop covers how the Monitored Professional Development Scheme (MPDS) and Supported Registration Scheme (SRS) work. With the opportunity to ask questions through the session, you will also get an insight into:

- the role and responsibilities of the mentor
- the skills that are needed
- quarterly reports and annual assessments
- the academic and competence requirements for registration
- Continuing Professional Development (CPD)
- What to expect at your PRI

Top tips: Your Professional Review Interview (PRI)

Are you interested in finding out more about the IMechE PRI? This session gives you an overview of the format, and duration of the interview. You will learn more about what to expect, the scoring system used by our Assessors, case histories and anecdotes. We close the session with a question and answer, so you can ask any questions and attend your interview informed and ready to go.

Career Learning Assessment (CLA)

Are you an experienced engineer without the required academic qualifications for professional registration then this session is for you. We explain how your technical work-based learning may be used through a written assessment process called Career Learning Assessment (CLA).

Essentials for Early Careers Engineers

Are you a Developing Engineer (DE)? This session is your essential guide to using IMechE tools and resources available to record your Initial Professional Development (IPD). The workshop covers what makes a good quarterly report and gives you top tips for staying on track with recording your IPD.

CPD

Continuing Professional Development (CPD) is required for all IMechE members. This session is a quick guide on what CPD is in an IMechE context, how to use IMechE resources to achieve your CPD goals, and what to expect if you are invited to take part in the annual CPD audit.
